
April 05, 2022
BNL SCC 1241-1

Dear Valued Customer,

This notice is an update to the previously communicated ERP System Update (SCC 1241). Brand-Nu Laboratories implementation date for Microsoft Dynamics AX ERP system is targeted for mid-April.

Brand-Nu Laboratories lot number formatting will change with the new system. Previously, the lot number format was indicative of the year of manufacture. With the new system, the lot numbers will be a sequential set of numbers that is automatically assigned by Microsoft Dynamics AX and does not represent the year of manufacture.

Lot number format for products packaged prior to 04/11/2022:

- The first two digits are numeric and define the month
- The next two digits are numeric and define the day
- The fifth digit is numeric and denotes the year: (1= 2021, 2= 2022)
- The last two digits are numeric and are sequential starting over each day at 01:
 - (01 is the first lot assigned that day, 02 is the second, 03 is the third, etc.)

Example lot number: 0104101 was assigned on January 04, 2021:

- 01 = January
- 04 = day
- 1 = 2021
- 01 = the first lot number assigned that day

Lot number format for products packaged beginning 04/11/2022:

- The first two digits will be BO for batch order
- The next six digits are sequential based on when they are assigned

Example lot number: BO000012

Product that was packaged before the ERP system implementation will reflect the prior lot number formatting and will not be relabeled with the new lot number format. The lot number format change only affects Brand-Nu Laboratories labeled product.

This ERP implementation will also result in a change to the way supplier product numbers are listed on the packing list and related paperwork. Historically, Brand-Nu has shortened certain vendor product codes to fit the prior inventory system that was used. With the new ERP system there is no need to shorten the vendor product code. This will only affect products that are distributed.

There will be no change to the quality of the products that are supplied to you or the way in which they are manufactured or packaged.

We appreciate your continued confidence and interest in Brand-Nu Laboratories.

Best Regards,

Rachel Harlan
Quality Coordinator
